CP3010-SA
Intel® Atom™ 3U CompactPCI® CPU BOARD

Intel®'s latest Atom™ technology provides signifi cant increases in performance and energy effi ciency by using the new leading-edge 22nm Tri-Gate SOC (system-on-a-chip) manufacturing process.

The CP3010-SA Kontron's latest low-power 3U CompactPCI® CPU board supports the Intel® Atom™ processors E3827 and E3845 with a maximum of quad-core 1.91 GHz processing performance. Even though the board design is based on Atom™ technology, performance levels of former Core™ 2 Duo platforms can be reached. Further, the built-in graphics core now features Intel® HD Graphics Technology offering an outstanding increase in graphics performance compared to previous Atom™ designs. Memory demanding applications can make use of up to 8GB soldered DDR3L running at 1333MHz. For onboard data storage the CP3010-SA offers a CFAST option or a soldered SATA Flash and a HDD/SSD option on the 8HP extension module. On the system side, the CP3010-SA supports a PCI 32-bit, 33MHz (66MHz on request) CompactPCI® interface enabling the peripheral mode feature.

Low-Power Design
Using the latest Atom™ technology, the board offers a very low TDP (thermal design power) value. This feature, in conjunction with the special heatsink design, makes the CP3010-SA a perfect fi t for all systems and applications where cooling by fans is not desired or not possible. As a result, operation in temperature ranges from -40°C up to +85°C is possible.
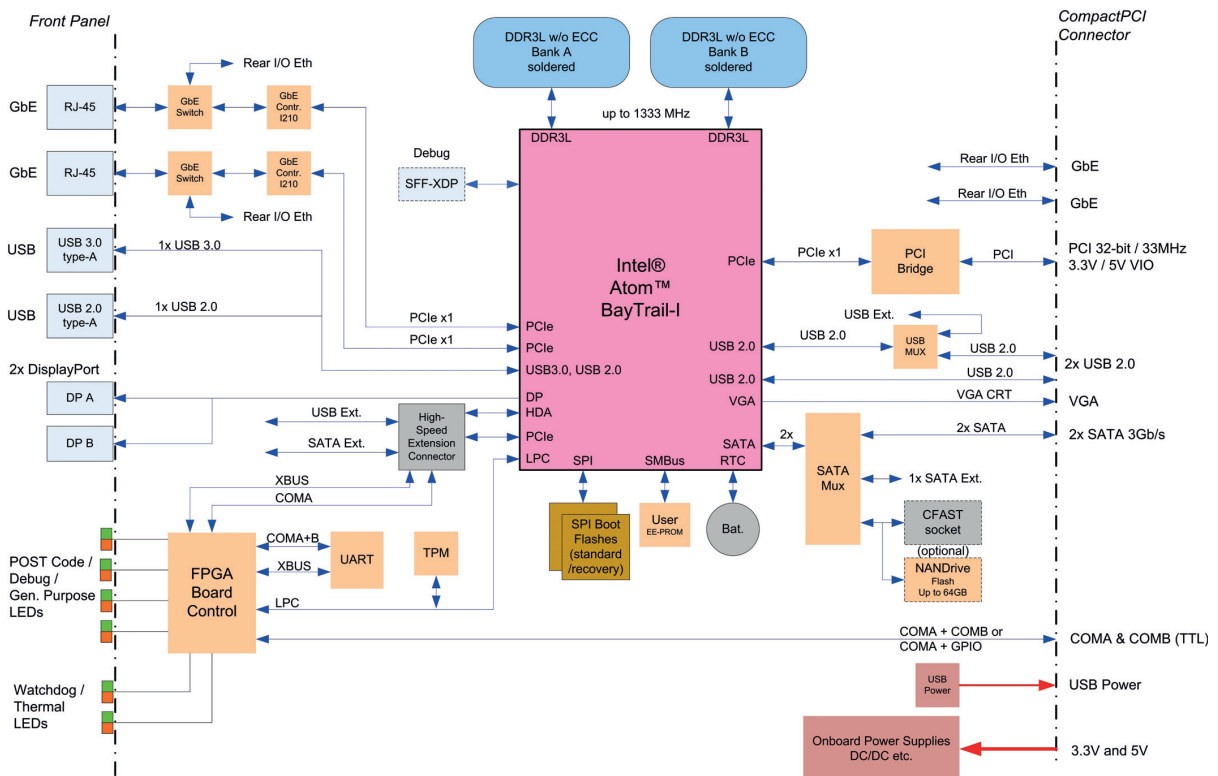

Robust Board Layout
Designed with direct soldered processor and memory to handle even the toughest environmental conditions, the CP3010-SA can be used in industrial and mobile applications where motion, shock and vibration typically can be found. With respect to the transportation market the CP3010-SA is designed to meet EN50155.

Comprehensive I/O Connectivity
The CP3010-SA comes with a comprehensive I/O feature set supporting interfaces such as DisplayPort, USB 3.0/2.0, Gigabit Ethernet, SATA, CAN, RS-232 serial ports in common with the audio interfaces Line-In and Line-Out. Available as 4HP or 8HP version – optionally combined with rear I/O support - the CP3010-SA can be adapted to a wide range of application needs.

Long-Term Availability
Investing in a new project is always a challenge and risky. Extending the lifetime of an application to the possible maximum is therefore a critical issue to preserve the development investments. Delivering a stable product based on Intel®'s embedded product line, the CP3010-SA ensures long-term availability. This eliminates the risk of unplanned design changes and unexpected expensive application modifi cation. While minimizing deployment risks by providing a broad range of software support, the CP3010-SA eases the process of product integration and maximizes competitive advantages to meet time-to-market windows.
